

CRISTOPHER MORALES

Full-stack Developer / Python Developer

Personal information

VISA

Dependant

Address

Asaka, Saitama, Japan

Phone

080-9355-9193

Email

cristopher.javier@hotmail.com

Nationality

Chilean

Desired Work

Type: Full Time

Field: Software Developer

Functions:

- Full-stack Developer
- Python Developer

Skills

- Python
- Javascript
- Typescript
- NextJS
- Tailwind
- Source control
- PostgreSQL

Certifications

- 100 Days of Code: The Complete Python Pro Bootcamp for 2023 (Udemy. Instructor: Dr. Angela Yu)
- The Complete Web Developer in 2023: Zero to Mastery (Udemy. Instructor: Andrei Neagoie)
- TOEIC (985)

PROJECTS

● Face recognition Web App

<https://smartbrai.netlify.app/>

FLASK - NEXTJS 13 - POSTGRESQL

- Created a web app that recognizes a face or faces in pictures from the web using **Clarifai API**.
- Implemented user sessions with **Next-Auth**. Managed user session and storage on Python using **Flask** and **Flask-SQLAlchemy** for **ORM**. Improved API security with **Axios**. Made user input validation with **Zod**. Used **PostgreSQL** to store user data like **username**, **hashed password**, **email**, etc. Incorporated logic for user avatar image **storage** and **selection** using the cloud-based platform **Firebase**.

● AI Tic-Tac-Toe

<https://github.com/CrisMorinaga/Tic-Tac-Toe>

PYTHON - PYGAME

- Re-created the classic Tic-Tac-Toe game with pure Python and the PyGame library. It uses the coordinate system that is provided by PyGame to track mouse position and mouse clicks.
- Uses 2D arrays (Matrices) and 3D arrays (Tensors) in order to save used positions and possible positions. This was made in order to check winning conditions and create the AI to play against.
- Features a player vs player or a 3-level AI to compete against. The AI levels range from easy (where you most probably will win as the AI just plays random moves), to hard (where you can only lose or tie).

EDUCATION

● Python Developer

54 hour course on Python development (Japan)

Feb 2023 - JUN 2023

- Prepared in a wide range of proficiency in Python development tools and concepts like Flask, Jinja, Selenium, BeautifulSoup, Request, Pandas, NumPy, Scikit Learn, Plotly, Matplotlib, etc.
- Well-prepared to effectively fix and debug problems that might require high-level problem-solving skills as well as having the tools to know where to look and find answers.

● Javascript Web Development Course

39 hour course on Web development using Javascript (Japan)

JUN 2023 - AUG 2023

- Equipped with a wide knowledge of Javascript development concepts primarily focusing on the creation of Web Apps with React and its tools and concepts like Responsive Design, DOM Manipulation, HTTP/JSON/AJAX, Asynchronous Javascript, Node.js, React Hooks, etc.
- Well-prepared to effectively understand how the web works and how to optimize projects and solve problems that might require that understanding.

● Typescript and Next JS

Self-Taught (Japan)

JUN 2023 - AUG 2023

- Learned how to use NextJs 13 alongside Typescript, effectively understanding its tools and implementing them into previous projects. Learned libraries and concepts like Next Auth, Axios, Framer Motion, Zod, Tailwind, type assertions, etc.
